

Hashing Data Structure meaning

unique

(key, value)

Java

HashMap

value

Hashtable

key	value
0	
1	1
2	
3	
4	4
5	
6	6
7	
8	8
9	9

value = 9

9th index

Search

$O(1)$ = constant

Direct addressing

Table

$$\text{value} = 10^5$$

Hash functions

↳ Division-modulo hash function

$$hf(v) = v \% m$$

modulo operator

Size of hash table

value

$$m = 10$$

to give the remainder

Hash table

key	value
0	100
1	91
2	
3	
4	
5	
6	
7	
8	88
9	9

collision in Hashing

hash

function

$$hf(89) = 89 \% 10 = 9$$

key

$$hf(100) = 100 \% 10 = 0$$

$$hf(9) = 9 \% 10 = 9$$

$$hf(88) = 88 \% 10 = 8$$

$$hf(91) = 91 \% 10 = 1$$

2 values are having same key

Hash table

Collision

Resolution

Techniques

Open addressing
